Expected use by alfalfa for this week is 2.1 inches.

In past week, actively growing lawns used 2.3 inches.  
Expected use by actively growing lawns for this week is 2.4 inches.

In the past week average ET gage readings were 2.0 inches.

The average rainfall for the district was 0.28 inches.

The weather forecast for the next week shows highs being 90's. With lows in the 60's night.

In the last week soil moisture monitoring station 1 showed 70% water available at 12", 75% water available at 24", and 78% water available at 36". The producer did irrigate. Remember this is in a **Sandy Loam** soil type with **Corn** planted and will vary depending on site specific; weather, irrigation management, topography, management practices, crop, and soil type.

In the last week soil moisture monitoring station 2 showed 9% water available at 12", 71% water available at 24", and 23% water available at 36". The producer did irrigate. Remember this is in a **Loam** soil type with **Corn** planted and will vary depending on site specific; weather, irrigation management, topography, management practices, crop, and soil type.

The crop water use report is completed using the average growth stage for each crop and ET gage reading from across the district. To find the conversion your specific crop growth stage visit <https://nawmn.unl.edu/GrowthStageData>

For more information or to inquire about ET gages or soil moisture monitoring equipment, please contact Tricia Goes at the Upper Niobrara White Natural Resources District at 308.432.6190 or visit our website at [www.unwnrd.org](http://www.unwnrd.org). We are committed to helping Nebraskans conserve and protect groundwater.
